CAREER OBJECTIVE

Data-focused professional with experience in Python, SQL, data analysis, and machine learning. Skilled in data preprocessing, exploratory data analysis, statistical analysis, visualization, and predictive modeling. Interested in applying data-driven solutions to real-world business problems.

SKILLS

- Programming: Python, SQL.
- Data Analysis: Pandas, NumPy, Excel.
- Visualization: Power BI, Tableau, Matplotlib, Seaborn.
- Machine Learning: Scikit-learn, Regression, Classification, Clustering, Feature Engineering.
- Statistics: Probability, Hypothesis Testing, A/B Testing.
- Tools: Jupyter, Git, GitHub.

WORK EXPERIENCE - Intellostack Technologies pvt. ltd. from July 2025 to Aug 2026

- **ChatMyVideo — RAG-Based YouTube Assistant - [Live](#)**
 - Built ChatMyVideo, a multilingual YouTube RAG chatbot using LangChain, Groq (LLaMA/GPT-OSS), FAISS, and HuggingFace E5 embeddings to deliver transcript-grounded answers.
 - Engineered the end-to-end RAG pipeline with semantic retrieval, FAISS indexing, LCEL chains, and secure API/deployment setup on a zero-cost stack.
- **Vendor Invoice Intelligence System – Freight Cost Prediction & Invoice Risk Flagging - [Live](#)**
 - Freight Cost Prediction: Predicted freight costs using regression models and invoice data.
 - Invoice Risk Flagging: Identified high-risk invoices using classification models and F1-score evaluation.
- **Movie Data Analysis Project**
 - Collected 8,000+ real-world movie records using web Scraping.

PROJECTS

Social Media Addiction Analysis & Prediction Model EDA and ML | [Link](#)

- Performed EDA on social media data to analyze usage, addiction, and productivity trends.
- Processed and visualized data using Python, Pandas, Matplotlib, and Seaborn.
- Currently Developing a machine learning model to predict social media addiction.
- Identified key behavioral factors such as scroll rate, self-control, and watch time affecting user engagement.

Bank Management System using Python, OOP | [Link](#)

- Built a console-based banking application with core features like account creation, deposit/withdrawal.
- Applied OOP principles such as encapsulation, constructors, and inheritance to model real-world banking operations.
- Used file handling for persistent data storage and implemented password protection for basic account security.

Matrix Calculator Using Python & NumPy | [Link](#)

- Built a Python tool for performing essential matrix operations.
- Used NumPy for efficient numerical processing.
- Improved accuracy in mathematical computations.

EDUCATION

- **Bachelor of Technology - Computer Science and Business Systems**
Oriental Institute of Science & Technology, RGPV University, Bhopal (M.P.) | 2021 – 2025 | CGPA - 7.9
- **Class XII (PCM)**
Bright Career Higher Secondary School, MP Board, Pipariya (M.P.) | 2019 | Percentage - 89.4%
- **Class X**
Bright Career Higher Secondary School, MP Board, Pipariya (M.P.) | 2017 | Percentag - 90.2%

CERTIFICATION

- **TIH IIT PATNA:**
 - AIML Developer
- **CISCO:** Python [Link](#)
- **NPTEL:**
 - Python for Data Science [Link](#),
 - Data Analytics with Python [Link](#)
- **PMKVY SKILL INDIA CENTER:** AI Data Scientist [Link](#)

TRAINING & ACHIEVEMENTS

- Secured **First Place** in a **Project Poster Presentation competition** organized by **Oriental Group.** [Link](#)

CO-CURRICULAR ACTIVITIES

- Core Team Member at Pixela Club.
- Played Volleyball & Basketball in college.
